

INDOOR CHEAT SHEET

videofied
Made by RSI VIDEO TECHNOLOGIES

HOMEPAGE	Videofied.com
SALES SUPPORT	651-855-7800 Opt 15
TECHNICAL SUPPORT	651-855-7800 Opt 45
TECHNICAL RESOURCES	Support.Videofied.com

PANEL SPECIFICATIONS & OPTIONS

PART #	XT PANELS	
	XT-IP620	XT-IP630
DESCRIPTION	Ethernet-only XT Panel	Ethernet+Cell XT Panel
Zones	24	
Communications	IP Ethernet	IP Ethernet, Cell
Temp rating	14 to 104 °F	
Xtender/Upgrade capable?	Yes	
Weatherproof?	No	
Arming inputs	2	
Programmable inputs	3	
Programmable outputs	2	
VideoApp4All compatible	Yes	

SYSTEM FEATURES

- ✓ Communication over IP Ethernet, cellular or WiFi (for W panels with WWB100 Board)
- ✓ Power control panels by batteries or 12V DC
- ✓ Military-grade RF, Full RF supervision
- ✓ Up to 19 user codes / badges
- ✓ Auto arm / disarm on 7-day Schedule
- ✓ Opening / closing reports by user
- ✓ Exit / entry delays
- ✓ Tamper alerts
- ✓ Remote arming/disarming and Look-in with VideoApp4All

INSTALL NOTES

1. Must have a Videofied Keypad or Frontel TMT/Programming Cable to program the system
2. PP4 power supply (for XT panels) required if using IP/Ethernet or VideoApp4All Smartphone App

RF Range Expectations (915 MHz)*

APPLICATION	RANGE (ft)
Commercial building	Up to
Residential building	500

* These numbers are estimates. RF signals vary by environment. Test RF signal using demo kit whenever possible.

Indoor MotionViewer®

Battery Life Expectations*

APPLICATION	YEARS
Indoor	Up to 4

Indoor MotionViewer®

Detection Angles, Ranges

COMPONENT	IMV601
PIR Motion Detector	90° / 40 ft.
Infrared Illuminators	23 ft.
Video Camera	110°

Videofied Questions and Answers

Why Videofied?

Videofied is a video alarm system. Unlike traditional blind alarms, Videofied MotionViewers take a short video clip every time the built-in PIR trips for verification, review and dispatch from monitoring stations and priority response from law enforcement.

Why is the video so basic? Can it be adjusted?

The video specs are fixed and the file size is kept small intentionally to ensure FASTEST possible transmission to central station. Videofied is designed to VERIFY, not identify.

Why not just get a high-resolution camera system?

Traditional high-resolution camera systems are HISTORICAL video tools, used for post-event follow up and forensic details. Videofied is an IMMEDIATE video tool, allowing for reaction while the crime is still in progress. Don't allow a trespasser to vandalize or steal all night!

Where can I put a Videofied system?

Because the entire system is wireless and capable of running on batteries, it can be installed anywhere there is 3G/4G cell signal!

Can the Videofied system be self-monitored?

No. Videofied panels always transmit to a professionally staffed 24-hour monitoring center to provide customers with full-time security and peace of mind. Customers are notified ONLY when human activity has been confirmed and not on non-emergency events.

Can I look in on the MotionViewers?

Yes. With the a smartphone app you can request a Look-in from any MotionViewer (requires power supply on panel).

Do I need lighting? How far can the illuminators reach?

No. MotionViewers have BUILT-IN infrared illuminators for night-vision detection; Indoor = 23 feet

Do the MotionViewers pre-record?

No. Because the MotionViewer is a proprietary ALL-IN-ONE component, camera reaction time to a PIR trip is nearly instantaneous (1/10th sec). There is no need for pre-alarm video.

Does inclement weather affect the system?

No. Through the advanced algorithmic technology in the PIR, the MotionViewer does not trip on rain, snow or lightning except in extreme cases.

What if someone grabs the MotionViewer?

If you are doing an install where theft may be a major concern, remember you can install devices very subtly since they do not need to be wired or powered. Even if someone does approach an armed MotionViewer, the event will be captured and transmitted to the panel which may be hundreds of feet away!

General Tip:

Videofied is a wireless video alarm system designed for monitored video verification and priority response. Besides being a complete standalone alarm system, Videofied can also be used as a video verification and priority response upgrade for existing residential and commercial indoor alarm systems.

Indoor MotionViewer

- Up to 4 year battery life (depending on alarm activity)
- VGA (640x480) color video camera
- Night illumination up to 23 feet
- Mounting height: 6.5 to 7.5ft, flat wall or corners
- Color/day and monochrome/night
- 5 programmable PIR sensitivity levels
- Temperature rated 14 to 104 °F

INDOOR APPLICATIONS

Whether you sell a standalone or upgrade system, Videofied means priority response and better security for your customers

Videofied Upgrade

Honeywell

DSC

2GIG by Linear

Upgrade existing burglar alarm systems to video verification and priority response.

video 4 all

SMARTPHONE INTERACTIVITY

Remotely arm/disarm the Videofied system and request Look-in from any MotionViewer at any time.

REMOTE LOOK-IN
