Overview

eBridge4PCRX is an four (4) port EoC Receiver that transmits data and power over coax cable. Unit generates PoE/PoE+ up the coax to an eBridge1PCT/eBridge-1PCTX transceiver. The transceiver in turn delivers that PoE compliant power to an edge device/camera. This plug and play unit facilitates system upgrades from analog to IP utilizing existing legacy Coax and eliminates the costs and labor associated with installing new network cabling. Data transmission and power over the Coax is possible up to 457m in comparison to 100m Ethernet distance (CAT5e). A maximum range from head end to the edge device/camera is 657m taking into consideration that up to 100m of structured cable may be deployed from the receiver

to the network switch and the transceiver to the edge device/camera. The eBridge4PCRX offers browser based power management and local and remote status monitoring. Lifetime warranty. Made in the U.S.A.
