SP4-3MEM Series Message Expander Modules

- ▶ Expands the voice message capability by up to three 20-second messages
- ▶ These message take priority over the messages shipped with the SP40/2

Wheelock's SAFEPATH4® SP4-3MEM Series Message Expander Modules are used with the SP40/2 Facilities Communication System and provide a means of expanding the number of digital voice messages by as many as three.

Each SP4-3MEM module consists of a single chip containing its own microprocessor and digital memory storage. The digital memory is divided into three 20-second segments. Each segment corresponds to one of the input circuits. The memory's structure in combination with the microprocessor allows recording of:

- Three separate 20-second messages, or
- One 40-second and one 20-second message, or
- One 60-second message

The chip cannot record messages at the control panel; therefore, messages must be recorded at the manufacturer's facility.

Installation/Configuration Notes

Compatibility Information

The SP4-3MEM expanders are only compatible with the SP40/2 Facilities Communication System.

Mounting Considerations

The SP4-3MEM expander mount directly to the SP40/2 motherboard.

Wiring Consideration

When wiring other modules to the SP4-3MEM expanders, the terminals accept 12 AWG (2.3 mm) to 18 AWG (1.2 mm) wire.

Parts Included

Quant.	Component
1	Message expander board
1	Hardware pack
1	Literature pack

Ordering Information

SP4-3MEM-SMK Standard Message Expander Module	SP4-3MEM-SMK
--	---------------------

Provides three separate 20 second standard pre-programmed messages

SP4-3MEM-PMK Custom Programmed Message Expander Module	SP4-3MEM-PMK
---	---------------------

Provides custom pre-programmed messages as three separate 20 second messages, or one 40 second and one 20 second message, or one 60 second message
