## F220-B6PS/M

Installation Guide<br>Addressable Detector<br>EN<br>Bases

### 1.0 Overview

These instructions cover the installation of the B6PS/M Addressable Detector Bases in an addressable system. The addressable system is controlled by a D9412G/D7412G or later 12 V control panel with a D8125 POPEX Module and 12 V or 24 V auxiliary power or a D9124 24 V Fire Alarm Control Panel (FACP).

The F220-B6PS works with either 12 or 24 V where the F220-B6PM only works with 24 V (refer to Section 6.0 Specifications on page 7).
The B6PS/M, with its built-in POPIT, provides individual addresses on the FACP data expansion circuit. These bases accept the F220 Series Photoelectric Smoke Detector and Heat Detector Heads. When using the B6PS/M with the F220 Series Detectors, these bases provide a Chamber Check trouble indication to the control panel through the POPIT Bus. The trouble indication appears at the control stations as a Fire Trouble.

When using these bases as replacements in a system controlled by control panels other than those identified such as the D8112, D7212B, or D7212B1, follow the control panel's address (point assignment) setting instructions and set the base address switch (0) to the ON position.

Chamber Check is a registered trademark of Bosch Security Systems in the United States.

### 2.0 Mounting

Install, test, and maintain the B6PS/M according to these instructions, NFPA 72 standards, local codes, and the Authority Having Jurisdiction (AHJ) in your area.

> Failure to follow these instructions can result in the detector not indicating an alarm. Bosch is not responsible for improperly installed, tested, or maintained detectors.

1. Select a mounting location according to the Smoke Detector Technical Service Note (P/N: 31347).
2. Run all system wiring to the base locations first.
3. Mount the base using the two oblong mounting holes.
4. Tighten the base to the mounting surface.
5. Connect the wiring to the base.

Depending on the local regulations, you can surface mount the base using anchors, mollies, or wing nuts. You can also mount the base on 4 in . $(10 \mathrm{~cm})$ octagonal electrical boxes or single-gang switch boxes.

Ensure the volume of the electrical box you use is adequate to accommodate the number and size of conductors as specified by the National Electrical Code (NEC) or any local regulations having jurisdiction.

### 3.0 Wiring

Table 1: Bases and Wire Gauges

| Number of Bases in Circuit | Wire Gauge |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 22 AWG ( 0.8 mm ) | 20 AWG (1.0 mm) | 18 AWG (1.1 mm) | 16 AWG (1.3 mm) |
| 1 to 70 | $1822 \mathrm{ft}(597 \mathrm{~m})$ | $2898 \mathrm{ft}(950 \mathrm{~m})$ | $4608 \mathrm{ft}(1510 \mathrm{~m})$ | 7327 ft (2402 m) |
| 70 to 80 | $1594 \mathrm{ft}(523 \mathrm{~m})$ | $2536 \mathrm{ft}(831 \mathrm{~m})$ | 4032 ft ( 1322 m ) | $6411 \mathrm{ft}(2102 \mathrm{~m})$ |
| 81 to 90 | $1417 \mathrm{ft}(434 \mathrm{~m})$ | $2254 \mathrm{ft}(739 \mathrm{~m})$ | 3584 ft ( 1175 m ) | $5699 \mathrm{ft}(1868 \mathrm{~m})$ |
| 91 to 100 | $1275 \mathrm{ft}(418 \mathrm{~m})$ | $2028 \mathrm{ft}(665 \mathrm{~m})$ | 3225 ft (1057 m) | $5129 \mathrm{ft}(1681 \mathrm{~m})$ |
| 101 to 110 | $1159 \mathrm{ft}(380 \mathrm{~m})$ | $1844 \mathrm{ft}(605 \mathrm{~m})$ | $2932 \mathrm{ft}(961 \mathrm{~m})$ | 4663 ft ( 1529 m ) |
| 111 to 120 | $1063 \mathrm{ft}(349 \mathrm{~m})$ | $1690 \mathrm{ft}(554 \mathrm{~m})$ | 2688 ft (881 m) | 4274 ft (1401 m) |

### 3.1 Terminal Connections

Do not twist the wires or loop them around the terminals. Cut, strip, and insert the in and out wires for terminal connection as individual ends.

区
Connect the power loop to the control panel's switched auxiliary power. When using a separate supply, connect the negative side to the control panel ground.

Figure 1: Terminals

### 3.2 Wire Size

The B6PS/M can accept any solid wire size from 12 AWG ( 2.0 mm ) to 24 AWG ( 0.6 mm ). The minimum wire size required by the bases is determined by the maximum number of bases used and the maximum distance from the FACP to the most remote base. For 12 AWG ( 2.0 mm ) and 14 AWG ( 1.6 mm ) wire, use the specifications for 16 AWG ( 1.3 mm ) wire. Refer to Figure 2 and Figure 3 on page 4 for wiring multiple bases.

> $\square$
> Use a at least 18 AWG ( 1.0 mm ) wire for Underwriters Laboratories. Inc. (UL) Listed requirements.

Use the B6PM with the F220-B6 two-wire base for the F220-P/PTH/PTHC/135/135F/190F Detectors (refer to Figure 4 on page 4).

Figure 2: B6PS Base Wiring

### 3.2.1 Wiring the B6PM

For the B6PM:

1. Each base can supervise up to 19 additional twowire detectors.
2. Wiring to the most distant slave detector cannot exceed $500 \mathrm{ft}(52 \mathrm{~m})$ with a wire that is 18 AWG $(1.1 \mathrm{~mm})$ or greater.
3. Connect the $3 \mathrm{k} \Omega$ end-of-line (EOL) resistor Bosch P/N: 15-03130-007 (F.01U.008.725) across the last base, Terminals A1/A2, and B1. When not using slave two-wire detectors with the B6PM, connect the $3 \mathrm{k} \Omega$ EOL resistor across the B6PM Terminals A1/A2 and B1.
4. Wire Terminal C to use the dirty detector feature with the slave two-wire bases. Do not enable the clean-me feature on the F220s.

### 3.2.2 Wiring the B6PS/M

For the B6PS/M, connect the power loop to the control panel's switched auxiliary power. When using a separate supply, connect the negative side to the control panel negative or POPIT Bus.

Figure 3: B6PM Base Wiring

Figure 4: B6PM Wiring with Multiple Bases

### 4.0 Base POPIT Addresses

Each detector base has a specific address point that is determined by setting the seven DIP switches on the detector's base. The base address number does not depend on the base location in the circuit. When using a D9412G/D7412G or later control panel or a D9124 FACP refer to Table 2 to set each base address. If adding the base to an FACP version B1 or earlier, set switch 0 to ON and leave all other switches off.

Figure 5 shows a magnified view of the address switches.

Figure 5: Address Switches

1- Terminal 1 (POPIT Bus +)
2 - Terminal 2 (POPIT Bus -)
3 - Terminal 3 (not used)
4- Terminal 4 (not used)
5- Terminal 5 (- auxiliary DC supply)
6- DIP Switch

Table 2: Addresses

| Switch |  |  |  |  |  |  |  | Switch |  |  |  |  |  |  |  | Switch |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 087 |  | - | - |  |  |  | - | 107 |  |  | - | - | $\bullet$ |  | - | 127 |  |  |  | - |  |  | $\bullet$ |
| 088 |  | $\bullet$ | $\bullet$ |  |  |  |  | 108 |  |  | $\bullet$ | - | $\bullet$ |  |  | 128 |  | serv |  |  |  |  |  |

$\bullet=$ ON Note: For Points 129 through 248, add 120 to Point Numbers 009 through128. For example, adding 120 to Point 009 is Point 129 Address (switch setting).

### 5.0 PAM-4 Relay Module Wiring

Table 3: PAM-4 Relay Module Wiring

| Wire Lead Color | Description | Contact Set |
| :--- | :--- | :--- |
| Red | Positive | N/A |
| Black | Negative | N/A |
| White | Alarm Sense | N/A |
| Blue | Normally Open | A |
| Green | Common | A |
| Yellow | Normally Open | B |
| Purple | Common | B |
| Orange | Normally Closed | B |

Only use the PAM-4 Relay Module with 24 V systems. The operating voltage of the F220-B6PS, when used with the PAM-4 Relay Module, is 18.9 VDC to 28 VDC.

Figure 6: PAM-4 Relay Module Wiring to B6PS/M

### 6.0 Specifications

Table 4: Specifications

|  |  | B6PS with Head |
| :--- | :--- | :--- |
|  | B6PS with PAM-4 Relay Module and Head |  |
| Auxiliary Power Voltage Range | 9.6 VDC to 28 VDC | 18.9 VDC to 28 VDC |
| Idle Current | 2.5 mA | 18.5 mA |
| Alarm Current | 35 mA | 51 mA |
|  | B6PM with Head* | B6PM with PAM-4 Relay Module and Head* |
| Auxiliary Power Voltage Range | 18.9 VDC to 28 VDC | 18.9 VDC to 28 VDC |
| Idle Current | 13 mA | 29 mA |
| Alarm Current | 39 mA | 55 mA |
| * Current ratings are based on a B6PM with 19 slave detectors. |  |  |
