System Overview

Pentabrid performance in a compact package. The HDVR-MX1608-1U5MP-AI1 in IC Realtime's Edge line of HDVRs blends HD-AVS/AHD/TVI/CVBS/IP support with our new AI features. This hybrid recorder also supports H.264 and H.265 as well as new AI Coding compression. This allows for enhanced video quality while keeping the bit rate the same, allowing you have both storage efficiency and quality.

Additionally, the recorder also has the capability of supporting up to 8 (6MP or less) or 24 total IP cameras by disabling all of the coax inputs.

This recorder also supports a suite of AI features including: up to 2 channels of IVS Perimeter Protection, 16 channels of Intelligent Motion Detect (iMD) and 2 channels of Real-Time Face Recognition with database. Up to two 10 TB hard drives are also supported by this HDVR.

iMD (Intelligent motion Detect)
This is an upgraded version of motion detection currently known as Intelligent Motion Detection (iMD). The upgraded Plus version greatly improves alarm accuracy by pre-loading a deep learning algorithm that recognizes people and vehicles. Motion detection alerts containing a human and/or vehicle intrusion event are now possible with up to 95% accuracy. Eliminate false alarms, save time and keep stress levels low knowing you're protected.

Smart H.265+
Smart H.265+ is the optimized implementation of the H.265 codec that uses a scene-adaptive encoding strategy, dynamic GOP, dynamic ROI, flexible multi-frame reference structure and intelligent noise reduction to deliver high-quality video without straining the network. Smart H.265+ technology reduces bit rate and storage requirements by up to 70% when compared to standard H.265 video compression.

Real-Time Face Recognition
This feature works with live video, historic footage, and snapshots. It allows users to identify facial attributes include gender, age, and expression of emotion. Additional characteristics can be applied such as glasses, mustache, face or mouth mask, and beard. Metadata can also be used to identify these characteristics. Enhanced features allow the user to import new facial images and catalog recorded or live view faces into a database for future alerts. Users are further able to create numerous lists and catalog facial images corresponding to those named lists. This allows for precise notification via email, text and push notifications via SmartICRSS PRO app. (Real-Time Facial Detection gives users the flexibility to analyze target feature while streaming live video or viewing history or snapshots. Importing facial images gives users full functionality and notification by retaining and cataloging faces.)
